How to Draw Krill
Order Euphausiacea

**Step One:** Roughly sketch the two basic shapes of the body – a large square and a long, narrow cone shape.

**Step Two:** Alter the square to form the indented shape of the head. Sketch in the six segmented rectangles of the tail.

**Step Three:** Add in five segmented legs on the first five segments of the tail. Sketch in six segmented legs from the upper body region. Add in the eye by colouring a dark circle. Sketch two long antennae coming from just above the eye. Draw several long rectangular tail pieces on the last tail segment.

**Step Four:** Darken your lines and erase any extra ones. Shade in the body by rubbing your pencil on an angle. Use a blending stick or your finger to soften the shade marks.
